

Credit Name: CSE 2110 Procedural Programming 1

Assignment Name: PerfectIntegers

Error Log Entry

What error message did you encounter (if any)?

I had many error messages as I was creating this code. One of the error messages that I encountered was that the isPerfect() method was not working properly. Another error that I experienced was syntax error when creating the for statements for this application.

What unexpected behavior did your program exhibit?

When I received the syntax error for my for loop, my code was not running. This issue mostly happened because my curly brackets were not correctly placed. Another unexpected error my code encountered was that the isPerfect() method was not checking if there were perfect numbers. This issue happened because the isPerfect() method was missing a curly bracket.

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

The for loop stopping the code from running was a syntax error and the issue that caused the isPerfect() to not work properly was a logic error. Due to this, my code was prevented from running. The isPerfect() is not working properly because I was missing a curly bracket. This meant that the code was not able to check the isPerfect() part which ultimately messes up my code.

Include a screenshot of specific lines of code.

```
// Loop through numbers from 1 to 100
for (int a = 1; a <= 100; a++)
}

// Check if number is perfect
if (isPerfect(a))
{
    System.out.println(a);
}
```

How did you fix the issue?

I was able to solve these issues by reviewing my code entirely. When I started reviewing my code, I noticed that I was missing curly brackets for my for loop. Due to this I was able to resolve the issue. This issue also fixed my isPerfect()

Provide the corrected code or solution using a screenshot.

```
{  
    // Loop through numbers from 1 to 100  
    for (int a = 1; a <= 100; a++)  
    {  
        // Check if number is perfect  
        if (isPerfect(a))  
        {  
            System.out.println(a);  
        }  
    }  
}
```
