Assignment Name: DigitsSum

Error Log Entry

What error message did you encounter (if any)?

An error code that I encountered was that my do-while loop had a syntax error. This syntax error was near the end of my while loop.

What unexpected behavior did your program exhibit?

An unexpected behaviour with my program was that it wasn't running and was displaying an error message in the console. When I saw the issue, I noticed that I had a syntax error with my do while loop. This error prevented me from testing my code and hence, stopped me from telling whether my calculations such as sum was working properly or not.

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

The issue was a syntax error with my do-while loop missing a curly bracket. I was missing a curly bracket because I did not close my do-while loop. Another syntax error that I had with my program that I missed was that I did not put a semicolon on my while loop.

Include a screenshot of specific lines of code.

```
20      if(a < 0)
21      {
22          System.out.pr
23      }
24  }
25  while(a > 0)
26  {
27      sum += a % 10;
28      a /= 10;
29  }
30
31
32  }
33
34
35
36
37  }
38
39  }
```

How did you fix the issue?

I was able to fix the issue by adding a curly bracket to close my do while-loop properly and a semicolon at the end of the while statement. This solved the problem and the while loop was working properly. After this was solved I was able to test my calculations to see if they were properly working and to check if my program made sure the user inputs a positive number.

Provide the corrected code or solution using a screenshot.

```
}  
while (a < 0); // Repeat the loop if the number is negative  
  
// Loop to calculate the sum of the digits  
while (a > 0)  
{  
    sum += a % 10; // Get the last digit using modulus and add it to sum  
    a /= 10;      // Remove the last digit from the number  
}
```
