Error Log Entry

What error message did you encounter (if any)?

No error message appeared on screen, but my code was not working properly.

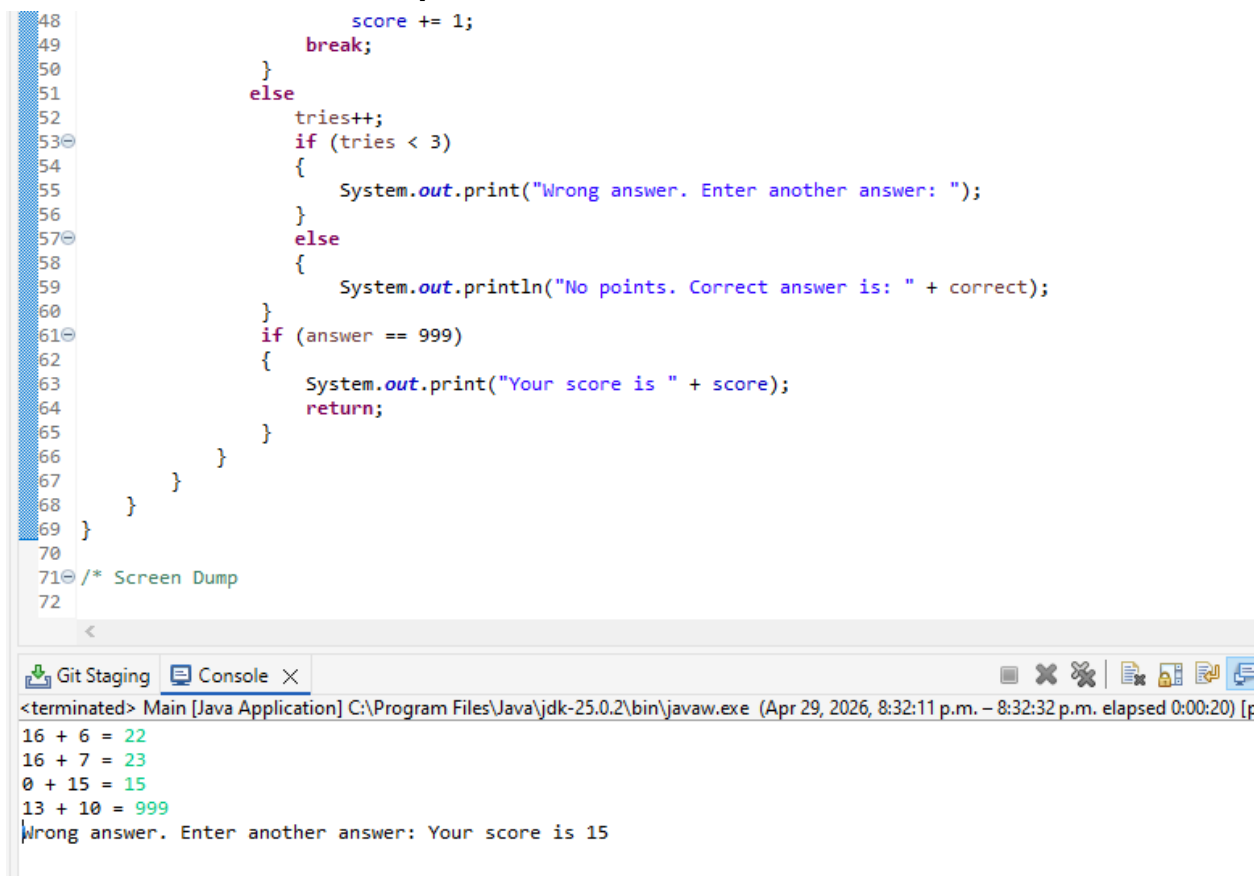

What unexpected behavior did your program exhibit?

The program displayed "Wrong answer" when the user inputs 999. That number is supposed to end the code and display the points the user got. Instead, it shows the wrong answer first and then displays the points.

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

This was a logic error because the code was missing curly brackets after the else statement. This made the next line of code, in this case, the if statement to be triggered.

Include a screenshot of specific lines of code.

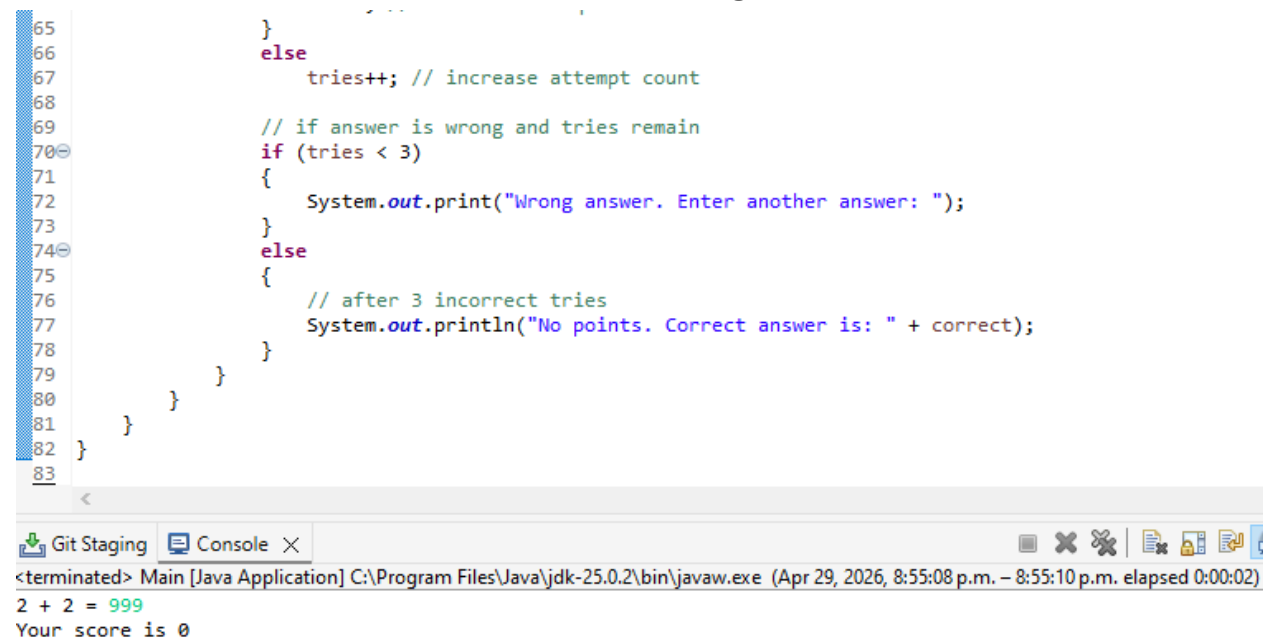

```
48         score += 1;
49         break;
50     }
51     else
52         tries++;
53     if (tries < 3)
54     {
55         System.out.print("Wrong answer. Enter another answer: ");
56     }
57     else
58     {
59         System.out.println("No points. Correct answer is: " + correct);
60     }
61     if (answer == 999)
62     {
63         System.out.print("Your score is " + score);
64         return;
65     }
66 }
67 }
68 }
69 }
70
71 /* Screen Dump
72
```

The screenshot shows a Java IDE with a code editor and a console window. The code editor displays a Java program with a logic error: a missing closing curly bracket for an 'else' statement on line 57. The console window shows the program's output, including the message "Wrong answer. Enter another answer: Your score is 15".

How did you fix the issue?

I added curly brackets near the else statement to fix the issue so that it wouldn't include the if statement.

Provide the corrected code or solution using a screenshot.

The screenshot shows a Java IDE with a code editor and a console window. The code editor displays the following Java code:

```
65     }
66     else
67         tries++; // increase attempt count
68
69     // if answer is wrong and tries remain
70     if (tries < 3)
71     {
72         System.out.print("Wrong answer. Enter another answer: ");
73     }
74     else
75     {
76         // after 3 incorrect tries
77         System.out.println("No points. Correct answer is: " + correct);
78     }
79 }
80 }
81 }
82 }
83 }
```

The console window shows the following output:

```
<terminated> Main [Java Application] C:\Program Files\Java\jdk-25.0.2\bin\javaw.exe (Apr 29, 2026, 8:55:08 p.m. - 8:55:10 p.m. elapsed 0:00:02)
2 + 2 = 999
Your score is 0
```
